

ARJUN LOYA

Boston, MA | 857-313-1735 | Loya.ar@northeastern.edu | [linkedin.com/in/arjun-loya](https://www.linkedin.com/in/arjun-loya) | Arjunloya.com

EDUCATION

Master's in Information Systems | *Northeastern University* | Boston, MA **Expected Dec 2026**
Relevant Courses: *Data Science Engineering Methods & Tools, Database Design & Management, Big Data Architecture & Governance, Prompt Engineering for AI* **GPA : 3.51/4**

Bachelor's in Business Administration - Information Technology | *SJC University* | Hyderabad, India **Aug 2022**
Relevant Courses: *Business Analytics, Statistical Analysis, Data Warehousing, IT Project Management* **GPA: 9.2/10**

SKILLS

Programming Languages: Python, SQL, R, PL/SQL
Databases: MySQL, PostgreSQL, Oracle, NoSQL
Cloud Technologies: AWS (QuickSight, RDS), Azure (Power BI Service), Snowflake, Databricks
Frameworks and Tools: Tableau, Power BI, Excel, JIRA, GitHub, Data Modeling Tools
Libraries: Pandas, NumPy, Matplotlib, Plotly, Seaborn, ggplot2
Other Skills: Data Governance, Data Quality Assurance, Statistical Analysis, Predictive Modeling

PROFESSIONAL EXPERIENCE

Accenture | Hyderabad, India **Business Intelligence Analyst** **Oct 2022 – July 2024**

- Designed and automated comprehensive analytics dashboards using Tableau and Power BI for tracking transportation KPIs and operational metrics across 5 business units, enabling data-driven decision making for 100+ stakeholders
- Built advanced SQL-based reporting solutions and ETL pipelines, extracting insights from compliance and logistics systems with 99.5% accuracy, supporting operational optimization and monthly audit reporting across departments
- Developed forecasting models using ARIMA and statistical techniques, collaborating with operations teams to translate business requirements into actionable dashboard components and predictive insights for strategic planning
- Implemented automated reporting workflows and real-time KPI monitoring dashboards, reducing manual analysis time by 40% and delivering operational insights 30% faster to executive leadership teams
- Created statistical analysis models and anomaly detection algorithms for operational optimization, improving efficiency monitoring by 25% and reducing operational bottlenecks through data-driven performance analysis

TeesGraphy | Hyderabad, India **Data Intern** **Jun 2021 – Nov 2021**

- Built comprehensive analytics dashboards using Excel and visualization tools for monitoring operational performance, resource utilization trends, and logistics KPIs for senior management strategic planning
- Performed data cleansing and validation on infrastructure asset databases, increasing report reliability by 35% for senior leadership decision-making
- Developed automated reporting templates and data validation processes, streamlining operational reviews and performance tracking for logistics and transportation management teams

ACADEMIC PROJECTS

NYC Ride Demand Forecasting System **Tech Stack:** R, Python, ARIMA, ggplot2, Tableau, Statistical Modeling

- Developed advanced forecasting models using ARIMA and statistical techniques in R to predict hourly transportation demand patterns from large-scale taxi datasets, achieving 85% prediction accuracy for operational planning
- Created comprehensive data visualizations using ggplot2 and Tableau, displaying demand trends, seasonal patterns, and surge analysis for autonomous fleet optimization and transportation resource allocation

Business Intelligence Dashboard – Supply Chain Analytics **Tech Stack:** Tableau, Apache Spark, SQL, Python

- Designed an end-to-end analytics solution using Tableau and Spark-based architecture for supply chain performance monitoring with real-time data integration and cloud-based storage systems
- Created interactive executive dashboards displaying key operational metrics, including throughput, latency, and logistics performance indicators, enabling strategic decision-making and continuous monitoring

ShopConnect – E-commerce Analytics Platform **Tech Stack:** SQL, Tableau, Python, Database Design, OLTP

- Built an advanced reporting system and transactional database architecture tracking user engagement metrics, conversion funnels, and operational efficiency across multiple channels for a Gen Z/Millennial-focused platform
- Implemented a real-time analytics pipeline with a robust OLTP architecture for trend analysis, consumer behavior insights, and strategic product planning, enabling data-driven inventory optimization
