

Arjun Loya

Boston, MA | (857) 313-1735 | Loya.ar@northeastern.edu | [linkedin.com/in/arjun-loya](https://www.linkedin.com/in/arjun-loya) | arjunloya.com

Education

Northeastern University | *Master of Science in Information Systems* | Boston, MA **Expected Dec 2026**

- **Relevant Courses:** Data Science Engineering Methods and Tools, Database Design and Management, Big Data Architecture and Governance, Prompt Engineering for AI.

St Joseph's Degree and PG College | *BBA in Information Technology* | Hyderabad, India **Aug 2022**

- **Relevant Courses:** Data Analytics, Statistical Analysis, Data Mining, Business Intelligence.

Technical Skills

Programming Languages : Python, R, SQL, PL/SQL
Analytics & Product Skills: Data Analysis, Market/Business Analysis, Process Improvement, Product Strategy Support
Libraries & Frameworks : Pandas, NumPy, scikit-learn, TensorFlow, PyTorch
Visualization & Tools : Power BI, Tableau, Excel, GitHub, JIRA, ServiceNow
Databases & Cloud : Snowflake, MySQL, PostgreSQL, Oracle, SQL Server, Databricks (PySpark), AWS, Azure
Certifications : Microsoft Azure Fundamentals (AZ-900), AWS Data Engineer Associate (in progress)

Work Experience

Accenture **Oct. 2022 – Jul. 2024**
Data Analyst *Hyderabad, India*

- Built automated SQL pipelines using Databricks and Python for regulatory compliance reporting, which reduced manual data preparation time by 20% and improved SOX audit readiness.
- Developed robust data validation scripts with Python (pandas) and SQL to automate quality checks, improving report accuracy to 99%+ and significantly reducing manual rework.
- Contributed to the migration of financial systems to Snowflake by assisting with ETL design and testing, improving data refresh performance by 25% and enhancing reporting speed.
- Trained two new team members on SQL best practices and documentation, improving onboarding efficiency by 30%.
- Partnered with cross-functional business, engineering and compliance teams to analyze requirements and recommend data-driven process improvements, contributing to product strategy documentation and lifecycle planning.

Shelfmerch **Jun. 2021 – Nov. 2021**
Data Intern *Hyderabad, India*

- Documented key business processes and built performance scorecards in Excel and Power BI, enabling leadership to track weekly KPIs and make data-driven decisions.
- Performed SQL-based data validation and analysis to resolve reporting challenges, improving data accuracy by 25%.
- Collaborated with management to identify process gaps and recommend IT-enabled improvements for sales reporting.

Projects

Business Intelligence Narrative Generator | *Python, Streamlit, Plotly, Google Gemini API* **GitHub**

- Engineered an AI-powered reporting system with Python, Streamlit, Plotly, and Google Gemini API, delivering executive-grade dashboards and narratives.
- Automated KPI extraction and advanced statistical analysis across multiple business datasets, reducing manual reporting time from over 8 hours to just 25 minutes and achieving a 94% faster process at 99% lower cost.
- Produced multimodal reports (HTML/Markdown/JSON) linking insights directly to interactive visualizations.

Database Management Project – E-commerce System | *Oracle Database 12c, SQL, PL/SQL* **GitHub**

- Designed and deployed a robust Oracle 12c database architecture with normalized tables, relational schemas, roles, stored procedures and triggers to support orders, user accounts and inventory workflows.
- Implemented role-based access control and automated validations to enforce business rules and secure sensitive data.
- Built analytical views for sales, inventory and customer behavior, enhancing business decision-making.

NYC Taxi Ride Demand Forecasting and Revenue Analysis | *Python, R, ARIMA, ggplot2* **GitHub**

- Analyzed over 7 million NYC taxi trip records with R (`data.table`, `tidyverse`) and applied ARIMA time-series modeling to accurately forecast hourly ride demand at about 87%, supporting data-driven planning for driver allocation.
- Quantified unmet demand, leading to estimated revenue losses of \$300–\$400 per hour during late-night shortages, and recommended optimized driver staffing and dynamic surge pricing to capture missed opportunities.
- Visualized demand patterns with forecasts, volatility plots and heatmaps to guide operational strategy.
